

Project Design Phase
Proposed Solution Template

Date	2 October 2026
Team ID	6ab8b403c23107aaaa72d105 (Team 23)
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	School IT helpdesk tickets are categorized manually - time-consuming, inconsistent and unacknowledged to the caller.
2.	Idea / Solution description	ServiceNow Flow Designer flow 'Auto Classify School IT Tickets' on the custom School IT Ticket table: when a ticket is created with an empty Category, Short-description keywords set Category + Subcategory (Wi-Fi/Wi-Fi/Network, Projector, Forgot password, Slow Computer) and the caller receives a confirmation email.
3.	Novelty / Uniqueness	No-code keyword automation with dependent Category-Subcategory choice lists, running inside the institution's existing ServiceNow platform - no additional infrastructure or scripting.
4.	Social Impact / Customer Satisfaction	Students and teachers get instant acknowledgment and correct routing the first time; IT staff focus on resolution instead of triage; measured 5/5 correct classifications in live UAT.
5.	Business Model (Revenue Model)	Platform-based: runs on the institution's existing ServiceNow licensing with zero additional cost; configuration is transferable to other institutions via the update-set XML.
6.	Scalability of the Solution	Declarative Else-If design - new issue types are added as additional branches without code; the same pattern scales across departments and campuses.
