

User Acceptance Testing (UAT) Template

Date	02 October 2026
Team ID	6ab8b403c23107aaaa72d105 (Team 23)
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Project Overview:

Project Name: Auto Ticket Classification using Flow Designer

Project Description: Automates ticket classification by evaluating ticket information in Flow Designer, updating classification fields and routing the ticket to the configured assignment group.

Project Version: v1.0

Testing Period: 02 October 2026 to 02 October 2026

Testing Scope:

Features/Functionalities: ticket trigger, classification conditions, ticket field update, assignment/routing, flow execution logging.

User Stories/Requirements: classify a new ticket correctly; handle different ticket descriptions; update required fields; route tickets to the configured group; handle incomplete input safely.

Testing Environment:

URL/Location: ServiceNow development/test instance – Flow Designer

Credentials: Not included in document; use authorized team/test credentials only.

Test Cases:

Test Case ID	Test Scenario	Test Steps		Expected Result	Actual Result	Pass/Fail		
		Bug ID	Bug Description	Steps to reproduce		Severity	Status	Additional feedback
TC-001	New ticket classification							
TC-002	Different ticket type	Create a ticket with a description matching another configured rule. Save. Review classification and assignment.	No confirmed defect recorded during planned UAT scenarios.	Ticket is classified according to the matching condition and routed correctly.	Ticket classification and routing matched the configured condition.	PASS	Closed	Continue monitoring during future test cycles.
TC-003	Incomplete ticket description	Create a ticket with incomplete description. Submit/save. Review flow behavior.	No additional defect observed in repeat execution checks.	Flow handles incomplete input safely without an invalid update or system failure.	Incomplete input was handled without an observed flow failure.	Low PASS	Closed	No corrective action required for UAT submission.
TC-004	Field update and routing verification	Create a ticket that matches a classification rule. Check category/classification fields. Check assignment group/owner.		All configured fields are updated consistently and routing is applied.	Configured ticket fields and assignment were updated as expected.	PASS	Bug Tracking:	
TC-005	Repeated ticket processing	Create multiple test tickets sequentially. Review each flow execution. Compare each ticket's classification.		Each ticket is processed independently without unintended duplicate classification.	Tickets were processed independently with expected results.	PASS		

Bug Tracking:

Notes:

- Ensure positive and negative ticket scenarios are covered during UAT.
- Record tester feedback and any suggestions for improving classification rules.
- If a defect is found, record severity, status, reproduction steps and feedback in the bug table.
- Obtain project/team approval before deployment.
