

Project Design Phase-II Technology Stack (Architecture & Stack)

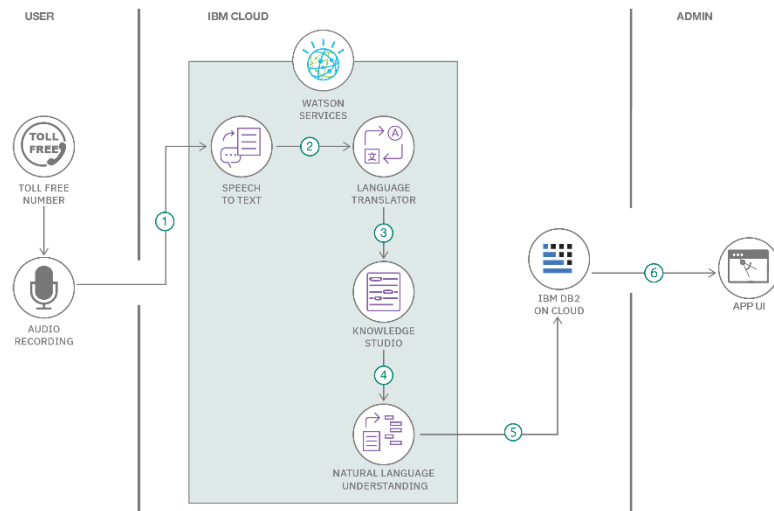

Date	2 October 2026
Team ID	6ab8b403c23107aaaa72d105 (Team 23)
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Order processing during pandemics for offline mode

Reference: <https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/>

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Ticket creation form and lists used by callers and IT staff	ServiceNow Next Experience (Polaris) UI - School IT Ticket form
2.	Application Logic-1	Keyword classification of the Short description (If / Else-If flow logic)	ServiceNow Flow Designer (If, Else-If flow logic)
3.	Application Logic-2	Write-back of Category and Subcategory to the ticket	Flow Designer "Update Record" action (u_school_it_ticket)
4.	Application Logic-3	Caller acknowledgment email after classification	Flow Designer "Send Email" action (sys_email / SMTP)
5.	Database	Storage of ticket records, choice lists and dependencies	ServiceNow Glide database - u_school_it_ticket + sys_choice
6.	Trigger	Starts the flow when a ticket is created	Flow Designer Record-Created trigger (Category is empty)
7.	Deployment & Versioning	Capture and transfer of all configuration	ServiceNow Update Sets ("Project Update Set", XML export)

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Platform-provided no-code automation components	ServiceNow Flow Designer (templates on developer.servicenow.com)
2.	Security Implementations	Role-based access, update-set capture, system-context flow execution	ServiceNow ACLs, admin roles

S.No	Characteristics	Description	Technology
3.	Scalable Architecture	Declarative flow handles growing ticket volume without code	ServiceNow Flow Designer runtime
4.	Availability	Runs on the ServiceNow platform (24x7)	PDI / customer instance SLA
5.	Performance	Classification completes within seconds of record insert	Background flow execution

Our architecture: Caller submits the School IT Ticket form (ServiceNow Next Experience UI) -> Record-Created trigger (Category is empty) -> Flow Designer flow evaluates Short-description keywords (If / Else-If) -> Update Record writes Category & Subcategory to u_school_it_ticket -> Send Email notifies the caller. All configuration is captured in the 'Project Update Set' update set (XML export for deployment).
