

Project Report Format

1. **INTRODUCTION**
 - 1.1 Project Overview
 - 1.2 Purpose
2. **IDEATION PHASE**
 - 2.1 Problem Statement
 - 2.2 Empathy Map Canvas
 - 2.3 Brainstorming
3. **REQUIREMENT ANALYSIS**
 - 3.1 Customer Journey map
 - 3.2 Solution Requirement
 - 3.3 Data Flow Diagram
 - 3.4 Technology Stack
4. **PROJECT DESIGN**
 - 4.1 Problem Solution Fit
 - 4.2 Proposed Solution
 - 4.3 Solution Architecture
5. **PROJECT PLANNING & SCHEDULING**
 - 5.1 Project Planning
6. **FUNCTIONAL AND PERFORMANCE TESTING**
 - 6.1 Performance Testing
7. **RESULTS**
 - 7.1 Output Screenshots
8. **ADVANTAGES & DISADVANTAGES**
9. **CONCLUSION**
10. **FUTURE SCOPE**
11. **APPENDIX**
 - Source Code(if any)
 - Dataset Link
 - GitHub & Project Demo Link

Project Report — Auto Ticket Classification using Flow Designer

Date	Team ID	Project Name	Maximum Marks
2 October 2026	6ab8b403c23107aaaa72d10 (Team 23)	Auto Ticket Classification using Flow Designer	-

Team Members: Amirthavarshini J (Team Lead), Ashwanth S, Deepan M, Aaditya Srinivasan K S

1. INTRODUCTION

1.1 Project Overview: The school IT helpdesk receives multiple daily requests (Wi-Fi, projectors, passwords, slow systems). This project automates ticket classification with ServiceNow Flow Designer: on creation of a School IT Ticket, keyword analysis of the Short description sets Category and Subcategory, and the caller receives an instant confirmation email.

1.2 Purpose: Remove manual triage, ensure consistent categorization, and acknowledge callers immediately - demonstrated end-to-end in a live Personal Developer Instance.

2. IDEATION PHASE

2.1 Problem Statement: Callers report issues but tickets sit untriaged until manually read; categorization is inconsistent and unacknowledged. **2.2 Empathy Map:** callers feel frustrated by silence and repetition; staff feel overloaded by routing work. **2.3 Brainstorming:** ideas grouped into Automation / Data quality / Communication / Future scope; the no-code keyword flow, dependent choices and caller email were selected (Predictive Intelligence deferred for lack of training data).

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map: mapped from issue notice to follow-up; automation converts the negative triage stage into a positive one. **3.2 Solution Requirements:** FR-1..FR-5 and NFR-1..NFR-6 (see Solution Requirements document). **3.3 Data Flow Diagram:** Caller - Create Ticket - Auto Classify flow - Update Record - Send Email - Caller. **3.4 Technology Stack:** ServiceNow Zurich PDI, Flow Designer, Glide table u_school_it_ticket, update sets, GitHub evidence.

4. PROJECT DESIGN

4.1 Problem-Solution Fit: keyword evaluation directly answers the triage delay and inconsistency. **4.2 Proposed Solution:** the Auto Classify School IT Tickets flow with four classification branches plus Send Email. **4.3 Solution Architecture:** form (Polaris) - Record Created trigger - If/Else-If - Update Record - Send Email on the ServiceNow Glide database.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning: 3 sprints, 6 user stories, 12 story points, work distributed across the 4 team members (see Project Planning document); all 12 SkillWallet tasks completed to review.

6. FUNCTIONAL AND PERFORMANCE TESTING

Five tickets across all issue types were created live (SCH0001002-1006). Every ticket was classified correctly within seconds; five confirmation emails were logged in System Logs > Emails. **6.1 Performance**

Testing: classification latency is a few seconds after insert (background flow); no failures across repeated runs.

7. RESULTS

7.1 Output Screenshots: published flow canvas, auto-classified ticket forms, email log, and update set - all included in the team GitHub repository Milestone-3/4/5 folders.

8. ADVANTAGES & DISADVANTAGES

Advantages: zero-touch triage, consistent data, instant acknowledgment, no-code maintainability.

Disadvantages: keyword rules must be extended manually when new issue types appear; relies on callers providing a meaningful short description.

9. CONCLUSION

The project proves a complete no-code triage automation on ServiceNow: correct classification on 5/5 live tickets, email acknowledgment, and a deployment-ready update set.

10. FUTURE SCOPE

Auto-assignment to resolver groups, SLA tracking, Predictive Intelligence (ML) classification once training data exists, chatbot intake, and self-service knowledge articles.

11. APPENDIX

- Source configuration: "Project Update Set" XML export (35 customer updates).
- GitHub repository: <https://github.com/Amirthavarshini2007/Requirement-Analysis-Planning>
- Project demo walkthrough: DEMO.md in the repository root.
- Instance: nowlearning-nlinst04741515-242fm-0001 (ServiceNow Zurich).
